To describe the safety and efficacy of stereotactic body radiation therapy (SBRT) for unresectable malignant pleural mesothelioma (MPM). Patients with unresectable MPM were treated with SBRT to a median dose of 44 Gy in four fractions. The study included 67 patients from 11 institutions. Median follow-up was 6.5 months. No grade 4 or higher toxicity was reported. Grade 3 toxicities were reported in 14.5% of patients, including radiation dermatitis (6.0%), dyspnea (4.5%), esophagitis (4.5%), and rib fracture (4.5%). The median progression-free survival was

8.1 months, and the 1-year local progression-free survival was 85.9%. SBRT is a highly effective modality for the treatment of unresectable MPM with minimal toxicity. The Pittsburgh Steelers began preparations for next season in the aftermath of one of the most unusual season finales in NFL history, one that resulted in an easy win over the Baltimore Ravens but ended with a controversial play. The team hit the reset button for 2019, reworking the roster and jettisoning those who were deemed expendable, including DeAngelo Williams and Ben Roethlisberger. And while the group of newcomers doesn't feature many stars, it at least has some decent role players. Among them is rookie wide receiver Anthony Mahoungou, who emerged in the spring and is hoping for a bigger role than he previously had with the Steelers. "I think just coming into training camp and the offseason program, I just want to work hard every single day and do what I can do to make the team," Mahoungou said. "I don't think about

much else, just what I can do, what I can teach on the field and hopefully somebody has an open spot." Mahoungou said his first-year focus will be mainly on learning the playbook and building rapport with teammates. Asked about his best attributes, he replied: "I think the most important is just the level of 1cdb36666d

I haven't realized this until now, but we have a problem with too-broad questions as legitimate questions. As in, we have a problem with people asking questions that are already answerable (e.g. "How to do X when you've run out of memory") with answers that are so broad, they constitute valid (albeit low-quality) answers to the original question. As a result, the site's goal of having a trusted central repository of low quality answers is thwarted. Instead, the site's goal of having a trusted repository of low quality answers where low quality = no useful information and no useful information has low quality, is thwarted. I'm not sure if this is any kind of "time" problem, "social" problem, or something else, but here's a thought experiment. Is it ok to ask questions that stray from the prescribed syntax for our site? Such as questions that are not actual questions. Maybe call them theoretical or concept questions, or whatever. And then of course, if it gets a reasonable number of responses, and people seem to like the question, accept it. That's not asking for an endless discussion about whether it is/is not a proper question. It is asking if it is allowed or not to ask the kinds of questions in the above scenario. I'm simply having this conversation as a way to see if I am alone
